The Obfuscation Elimination Facility for the Replacement of the Multitasking Incandescent Illuminating Radiation Source driven by Electromotive Force is Copyright 1988 to International Business Machines Corporation. All rights reserved. Retail price: \$59.78.

This text is composed of a series of non-blank characters separated by blanks. The interpretation of it explains the IBM approved method of operation of replacement of a malfunctioning multitasking incandescent illuminating radiation source. This document should be read in its entirety before attempting to replace such a unit.

The multitasking incandescent illuminating radiation source, herein referred to as the MIIRS, is driven by two electromotive force migration units connected to the MIIRS adapter socket.

When the MIIRS unit malfunctions, the following will be required to refunctionalize the unit:

- 1-New MIIRS unit. (Available from your local IBM dealer, \$57.82. See page 4 for further information.)
- 1-Altitude Increase Simplification-Decrease Modification Facility. (Also available from your local IBM dealer, \$1423.42. See page 4 for further information.)

Once these have been obtained, execute the following procedure to replace the unit:

1. Set any electromotive force control facilities to the reset bit (0) position. Failure to do so may result in the extermination of the organic entity which is attempting to replace the MIIRS.
2. Place the Altitude Increase Simplification- Decrease Modification Facility centered directly underneath the malfunctioning MIIRS. (See document XKR305898, Operation of the Altitude Increase Simplification- Decrease Modification Facility, \$34.59 at your local IBM dealer. See page 4 for further information.)
3. Operate the Altitude Increase Simplification- Decrease Facility as necessary to make it easy to remove the MIIRS.
4. Twist the MIIRS in a non-clockwise direction until it can be easily removed from the MIIRS adapter socket.
5. Insert the new MIIRS into the MIIRS adapter socket and twist it in a non-counter-clockwise direction until it resists twisting.
6. Alter altitude as necessary to operate the electromotive force control facility to enable the MIIRS. If the MIIRS does not operate, reattempt this procedure, and if that fails, contact your local IBM dealer.

The International Business Machine's approved method of locating International Business Machine's person to person distribution representative for individual microcomputer purchasers

The International Business Machine's approved method of locating International Business Machine's person to person distribution representative for individual microcomputer purchasers is:

1. Take individual microcomputer purchaser's postal approved zip code and add -5224.
2. Use International-National-State-Local telecommunications device to transmit the following digital code:

1-800-22-(Modified individual microcomputer purchaser's postal approved zip code.)
3. After it has been made perfectly translucent to the individual microcomputer purchaser that the person that he/she/it is conversing with hasn't the vaguest notion as to the location of the International Business Machine's person to person distribution representative's location, terminate connection.
4. Take twenty (20) paces out rear entrance of individual microcomputer purchaser's abode, turn approximately 157 degrees, 87 minutes, 23.75 seconds (This need only be approximate.)
5. Raise left body support unit 6.2 cm off of plain plane surface on which individual is based.
6. Open oral cavity, throw cerebral cortex backwards as far as possible, inhale vast quantities of nearby oxygen, exhale rapidly and vibrate vocal flaps to articulate the word, "HELP!"
7. The International Business Machine's person to person fairy will magically appear to aid the individual.
8. Return to page 2.
